

# Prince George Fire Centre: Status Report

Prepared 24/09/2020

Zone Fire Danger Rating and Activity Level		
Zone	Fire Danger Rating	Activity Level
Prince George	Low	1
Robson Valley	Very Low - Low	1
VanJam	Low - Moderate	1
Mackenzie	Low	1
Dawson Creek	Low	1
Fort St. John	Low - Moderate	1
Fort Nelson	Low- Moderate	1

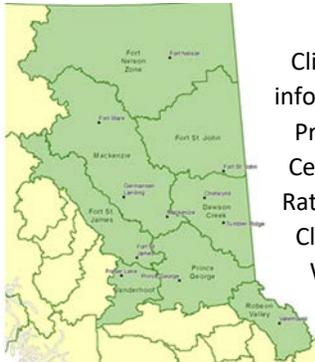

Overview
Over the past week, the Prince George Fire Centre (PGFC) has responded to 2 incidents for 0 new fires.
For more information regarding the requirements and regulations around Category 3 and Resource Management Open Fires, please <a href="#">click here</a>

Fire Activity			
Fires Currently Burning	0 (0 lightning-caused/ 0 human-caused) *Subtotals may not add up to the total, since fires not classified as "lightning-caused" or "human-caused" are still under investigation.		
New Fires Last Week	0		
	This Fire Season (since April 1)	Last Year (2019)	10-Year Avg. (2010 – 2019)
Total Fires to Date	56	129	305
Total Hectares to Date	254 ha	7560 ha	89,043 ha

Active Fires
There are currently no active wildfires within the Prince George Fire Centre.
For a map of registered burns and prescribed fires, please view the <a href="#">Open Fire Tracking System (OFTS)</a>

Fire Prohibitions and Restrictions		
 Open Burning	 Campfires	 Forest Restriction
Cat 2 – No Restriction Cat 3 – No Restriction RMOF – No Restriction	No Ban	No Restrictions
For more information on specific activities that are prohibited during a Category 2, Category 3 or campfire prohibition, visit <a href="http://bcfireinfo.for.gov.bc.ca/hprScripts/WildfireNews/Bans.asp">http://bcfireinfo.for.gov.bc.ca/hprScripts/WildfireNews/Bans.asp</a>		

### Prince George Fire Centre: Fire Zones

Weather Forecast
Isolated thunder showers are expected along the Rockies and in the Peace region today, with strong SW winds throughout the Prince George Fire Centre.
The rain is expected to shift northwards Friday afternoon, with most of the precipitation still falling along the Rockies and Peace region. Strong winds expected.
Saturday is anticipated to remain mostly dry east of the Rockies with periods of scattered showers to the west. Local gusting in the Peace is expected.
On Sunday, the precipitation is likely to shift from the SW to the NE of the fire centre, with strong winds occurring across the entire fire centre.

# Prince George Fire Centre: Status Report

Zone Activity Level	
<b>Level 1: (Exporting)</b>	
<ul style="list-style-type: none"> <li>Low to normal fire activity; no additional resource support is anticipated</li> <li>Adequate resources to deal with anticipated fire demands</li> <li>Monitor and anticipate possible support for non-wildfire provincial emergencies</li> <li>Zone resources may be deployed to other zones, fire centres, and out of province</li> </ul>	
<b>Level 2: (Exporting/ Holding)</b>	
<ul style="list-style-type: none"> <li>There is an increase in fire activity; zone resources are adequate to meet their demands</li> <li>Monitor and anticipate possible support for non-wildfire provincial emergencies</li> <li>Limited resources may be deployable to other zones, fire centres, or out of province</li> </ul>	
<b>Level 3: (Holding)</b>	
<ul style="list-style-type: none"> <li>There is an increase in fire activity; zone may not be able to meet local resource demands</li> <li>Resources from other zones / fire centres may be requested to assist zone activity</li> <li>Long term strategic planning becomes critical in determining what resources are needed where</li> <li>Zone staff on standby based on anticipated needs</li> </ul>	
<b>Level 4: (Holding/ Importing)</b>	
<ul style="list-style-type: none"> <li>The zone is experiencing a high level of fire activity</li> <li>Zone resources will need to be supplemented from other zones / fire centres / type 2 crews</li> <li>Out of province resource requests for specific or critical resources may be required if provincial resource capacity is not able to handle fire demands</li> </ul>	
<b>Level 5: (Importing)</b>	
<ul style="list-style-type: none"> <li>The zone is experiencing very significant fire activity, and/or extreme fire behaviour; heavy demands on provincial and fire centre resources are occurring and anticipated to continue</li> <li>Resource capacity is supplemented with staff from Wildfire TEAMS, other Ministries, the forest sector, Fire Departments, and type 2/3 resources</li> </ul>	
Fire Stages of Control	
<b>Out of Control</b>	Describes a wildfire that is not responding (or only responding on a limited basis) to suppression action, such that the perimeter spread is not being contained.
<b>Being Held</b>	Indicates that (with the resources currently committed to the fire) sufficient suppression action has been taken that the fire is not likely to spread beyond existing or predetermined boundaries under the prevailing and forecasted conditions.
<b>Under Control</b>	The fire has received sufficient suppression action to ensure no further spread of the fire.

Fire Danger Rating	
Status	Description
<b>Low</b>	Fires may start easily and spread quickly but there will be minimal involvement of deeper fuel layers or larger fuels.
<b>Moderate</b>	Forest fuels are drying and there is an increased risk of surface fires starting. Carry out any forest activities with caution.
<b>High</b>	Forest fuels are very dry, and the fire risk is serious. New fires may start easily, burn vigorously, and challenge fire suppression efforts. Open burning and industrial activities may be restricted.
<b>Extreme</b>	Extremely dry forest fuels and the fire risk is very serious. New fires will start easily, spread rapidly, and challenge fire suppression efforts. Open burning, industrial activities and campfires may be restricted.

Wildfire Ranks	
Rank	Description
<b>1</b>	<b>Characteristics:</b> Smouldering ground fire, no open flame, white smoke, slow (i.e. creeping) rate of fire spread. <b>Firefighting tactics:</b> Direct attack with ground crews using hand tools and water delivery systems (i.e. pumps and hose).
<b>2</b>	<b>Characteristics:</b> Surface fire, visible, open flame, unorganised or inconsistent flame front, slow rate of spread. <b>Firefighting tactics:</b> Direct attack with ground crews using hand tools, water delivery systems, or heavy equipment. Hand constructed control lines and lines that have been cleared of combustible material will likely be successful.
<b>3</b>	<b>Characteristics:</b> Organised flame front – fire progressing in organised manner, occasional candling may be observed along the perimeter and/or within the fire, moderate rate of spread. <b>Firefighting tactics:</b> Hand constructed control lines alone are likely to be challenged, ground crews conducting direct attack may require air support from fixed-wing air tankers, skimmers or helicopters conducting bucketing or tanking operations. Control lines constructed by heavy equipment will generally be effective.
<b>4</b>	<b>Characteristics:</b> Grey to black smoke, organised surface flame front, moderate to fast rate of spread on the ground, short aerial bursts through the forest canopy, short-range spotting. <b>Firefighting tactics:</b> Ground operations may not be successful at the head of the fire, indirect tactics may be required to bring the head of the fire under control. Parallel attack may be used along the flanks of the fire to direct the head into favourable ground or fuels. Air operations may be required to support ground personnel.
<b>5</b>	<b>Characteristics:</b> Black to copper smoke, organised crown fire front, moderate to long-range spotting and spot fire growth. <b>Firefighting tactics:</b> The limited options available include indirect attack and planned ignitions to remove fuel in the path of this type of fire behaviour. Ground operations are often restricted to fighting the least active sections of the fire or conducting ground ignition operations from secure control lines with readily available escape routes and safety zones.
<b>6</b>	<b>Characteristics:</b> Organised crown fire front, long-range spotting and independent spot fire growth, possible fireballs and whirls, violent fire behaviour probable, a dominant smoke column may develop which influences fire behaviour. <b>Firefighting tactics:</b> Firefighting under these conditions is extremely dangerous. Suppression efforts will be well away from active fire behaviour and may include preparing structure protection measures or conducting indirect large-scale ignition operations in an attempt to steer the fire. Often, the safest and most prudent strategy is to pull resources back to safe areas, ensure that personnel and the general public are safe, and wait for fire behaviour to lessen before re-engaging in fire suppression operations.

*Disclaimer: The information in this status report is intended for general purposes only and should not be relied on for operational decisions as fires are dynamic and situations change quickly.
